

TransETHERNET

Ethernet has become one of the most successful and widely deployed delivery technologies in the world. TransETHERNET solutions are designed to help customers reduce network complexity, cost and management.

Make the most of TransACT's advanced technology with a TransETHERNET connection, carrying speeds of up to 10 Gigabits per second!

TransETHERNET connects your business through a private network offering reliable and streamlined access to information. Simple, easy and cost effective, TransETHERNET results in operational efficiencies that deliver improved performance and ultimately providing your business with that competitive edge.

Architecture

TransETHERNET is delivered over TransACT's own multiprotocol label switching (MPLS) based fibre-optic network, which is one of the largest in Canberra. This allows TransACT to provide carrier grade network solutions point-to-point, point-to-multipoint, as well as aggregated configurations, producing a flexible and cost-effective Ethernet service.

Reliability

TransACT's MPLS network provide high levels of service availability with multiple layers of network redundancy allowing customers to focus on core business with peace of mind.

Support

TransACT's Network Operation Centre actively monitors our network, 24 hours a day, 365 days a year with end-to-end monitoring.

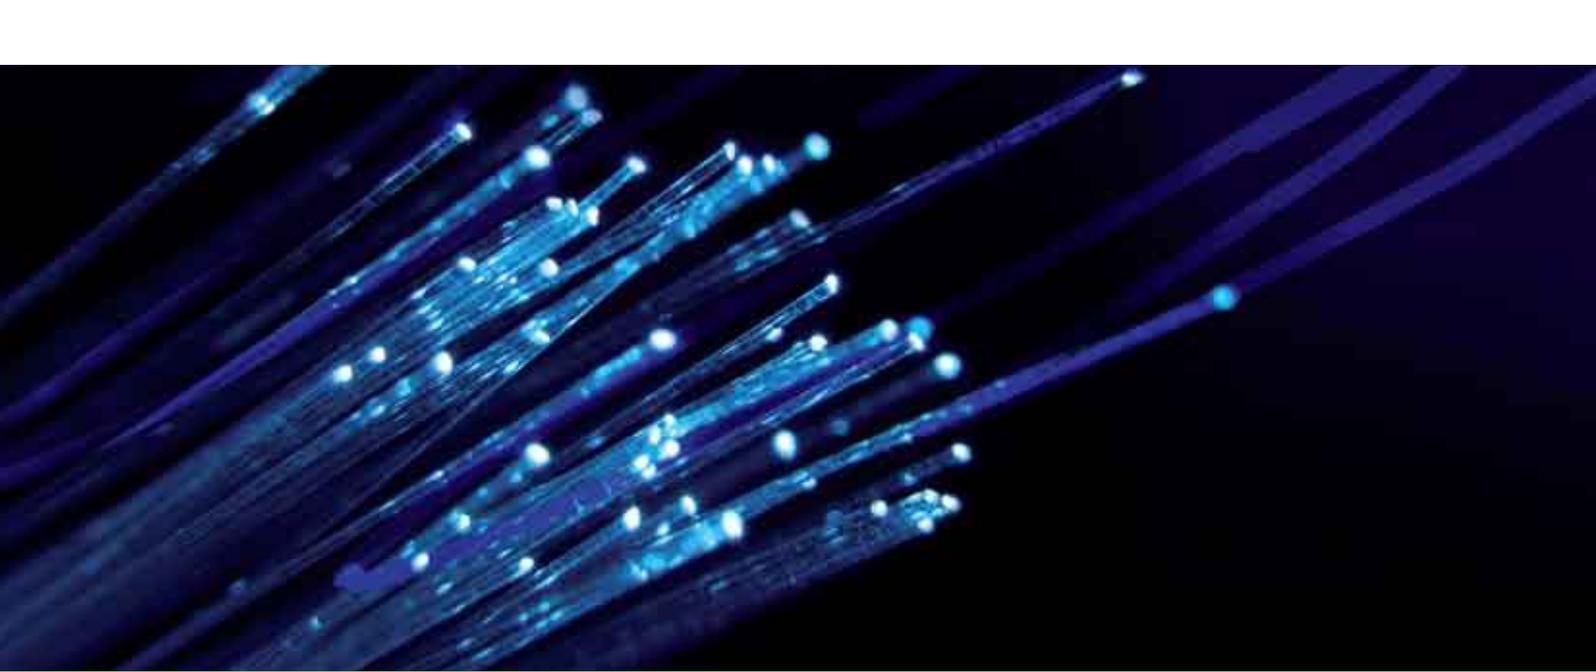

Connectivity

TransACT has a range of connectivity solutions allowing businesses to connect to a TransETHERNET solution on a multitude of networks rather than being limited to fibre coverage. These include Ethernet, Fast Ethernet, single-pair high-speed digital subscriber line (SHDSL), digital subscriber line (DSL) and wireless.

Customised

TransACT can provide a complete end-to-end solution to meet the most demanding business network requirements. We are serious in assisting local organisations run their business more efficiently and take pride in being able to deliver a tailored solution for every communication need: from fixed-line telephony, mobile phone, broadband, subscription television and Ethernet network solutions.

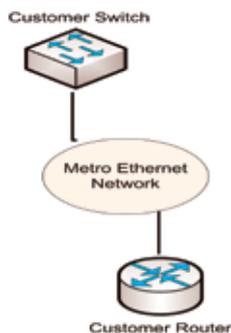

DELIVERY

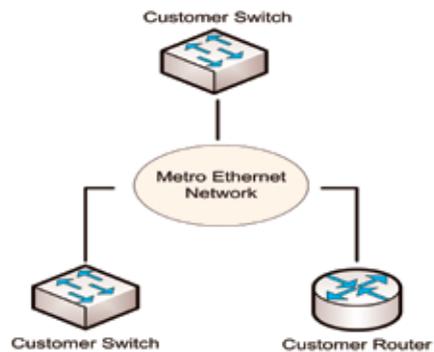

Point-to-Point (E-Line)

TransETHERNET point-to-point service allows you to connect two networks simply, in a timely and cost effective manner. The service looks and feels like an Ethernet cable connecting two geographically diverse locations together carrying speeds of up to 10 Gigabits per second. Furthermore, with the option of virtual local area network (VLAN) tunnelling, you control what VLAN numbers you want to use without coordinating with TransACT.

Point-to-Multipoint (E-LAN)

TransETHERNET point-to-multipoint service allows you to connect three or more networks offering scalable bandwidth solutions at each service location. The service looks and feels like an Ethernet switch connecting many geographically diverse locations and carrying speeds of up to 10 Gigabits per second.

Service Flexibility

TransETHERNET services can be combined with other TransACT products for increased flexibility. These services could include TransACT internet for high-speed symmetrical internet specifically designed for businesses; or TransACT telehousing for off-site backup, disaster recovery and content hosting; or combine with TransACT Biznet, TransACT's virtual private network solution catering for multiple sites.
